IP Services' Cybersecurity and Managed Services for Critical Banking Systems helps banks achieve compliance while protecting customer data by supporting and maintaining IT system availability and reliability. IP Services' IT process, management, and methodology enables banks to significantly reduce IT expenses and reallocate those resources to projects that have a direct business need and value.

IP Services uses an integrated set of processes and controls to ensure uninterrupted systems and business performance while adhering to strict compliance and security requirements. The value delivered by IP Services under this approach ensures:

- Alignment of IT with business goals while managing overall IT costs
- Achieve exceptional security posture using next-generation cybersecurity
- Better compliance with regulatory requirements and audits
- Improve IT strategy with IP Services operating as an extension of the bank's team
- Solve unsolvable IT problems
